Product Fact Sheet

May 22, 2019

Product Overview

Wanngi is a mobile web app that provides individuals with the ability to manage and take control of their health information. Wanngi allows members to create their own personal health record, empowering consumers to live healthier and more informed lives. Within this personal health record, consumers can track symptoms, manage allergies & immunisations, upload medical documents and manage meaningful fitness goals through wearables.

With Wanngi, people are connected to all of their personal health information, and can effectively communicate it to their coach,

doctor or trainer.

Wanngi's unique integration of services will reduce risk, improve general health, and ultimately save lives.

Core Features

Personal Health Record

Wanngi members are able to create their own personal health record. Wanngi enables people to record their visits to Health Practitioners, and keep track of medications, allergies, immunisations and tests.

Symptom and Injury Management

Using Wanngi's Personal Health Service, members are able to track symptoms and injuries, note the nature of symptoms (severity, duration, time and date, context) and visually represent this on a timeline. This enables them to easily relay detailed information about their symptoms and injuries to their doctor, trainer or coach.

Uploading and Saving Medical Documents

Using Wanngi's Personal Health Service, members can upload documents from their hospital or doctor - from referrals to discharge summaries - and store it securely for access wherever and whenever they are. This enables them to easily keep track of all their important medical documents, and stops the risk of losing or damaging paper copies. This feature is also useful for people that have had their health managed elsewhere – such as defence personnel or athletes, or for travellers to and from the United States (US) where healthcare providers may make health and medical records available as [Clinical Document Architecture](#) file (CDA's) on their website, over email or in an app.

View Fitness Data

Wanngi seamlessly integrates with Fitbit, Garmin, Strava and Google Fit, allowing members to view and track their fitness data within one app. This data is viewable both as a list and visually.

Goal Setting

Once they connect to a fitness device, members can create their very own fitness goals directly inside Wanngi, and track their progress. Daily and weekly goals are available.

Services

Wanngi currently offers five services.

- Personal Health - a personal health record to record visits to health practitioners, and keep track of medications, allergies, immunisations and tests. Includes the ability to view, manage and track symptoms and injuries and upload medical documents.
